

From hypotheses to a property recommendation

A decision story for Jacob Phillips

Premium quality

H1

Location-lot balance

H2

Renovation optionality

H3

Evidence → trade-offs → weighted buyer fit → recommendation

Three hypotheses turn the buyer brief into a testable search

BUYER BRIEF

Unlimited budget

Optimize fit, not price

Historic character

Built before 1945

Large lot

Land is a priority

4+ bathrooms

Non-negotiable

No waterfront

Explicit exclusion

H1 Premium features drive the highest sale prices

Quality should explain the price premium.

H2 Location creates a lot-size trade-off

Golf access should be balanced against land.

H3 Under-featured historic homes sell at a discount

Renovation can create a lower-cost alternative.

Decision rule

Choose the home with the strongest overall buyer fit—not simply the lowest price or the shortest golf distance.

Premium features correspond with higher median prices

\$2.30M

median price when all four
premium criteria are
present

Evidence

**Median price rises at
every step and
accelerates sharply at
four criteria.**

H1 SUPPORTED

The recommended home is the clear premium outlier

House 6762700020

\$7.70M

12,050 sq ft living
Grade 13
27,600 sq ft lot

Interpretation

Its price is justified only if its premium specifications also win the buyer-fit comparison.

Closer-in locations tend to trade land for access

Market pattern

Median lot size increases as homes move away from the urban core.

Decision implication

The right property must find a workable point between proximity and land—not maximize either one alone.

H2 TO TEST ON SHORTLIST

Land advantage is concentrated in only a few candidates

The trade-off

43,838 sq ft

Largest lot:
5249800010

27,600 sq ft

Recommended home:
second-largest lot

The recommendation preserves substantial land without accepting the golf-access penalty of the largest lot.

The closest golf homes sacrifice space and premium quality

Recommended

2.49 km

Balanced access

Closest homes

0.39–0.53 km

But they offer only 11,765–13,431 sq ft lots and smaller living areas. Proximity alone does not satisfy the brief.

Renovation candidates offer a meaningful price discount

48% lower

median price per sq ft for the renovation profile

Decision implication

The renovation path is economically attractive, but it optimizes value—not the buyer's stated preference for premium quality.

H3 SUPPORTED

Weighted buyer fit resolves the competing trade-offs

0.79

Highest overall buyer fit

+0.13

lead over the next candidate

Weights

Lot 30% • Golf 25%
Living 20% • Grade 15%
Condition 10%

A transparent decision aid—not
a market valuation model.

The selected home sits within practical reach of the golf club

House 6762700020

ZIP 98102

2.49 km

straight-line distance

Location verdict

**Not golf-adjacent,
but close enough to
preserve access
while retaining a
27,600 sq ft lot.**

Each chart answers a specific hypothesis—and a decision question

	Chart / evidence	Result	What the graph shows	How it changes the decision
H1	Premium-criteria median price	Supported	\$0.32M → \$2.30M as criteria rise from 0 to 4	Premium quality merits a higher price.
H1	Qualified-home price comparison	Supported	\$7.70M recommendation is the premium outlier	Validate price through specifications and fit.
H2	Distance vs. median lot size	Supported	Closer-in homes generally have smaller lots	Expect a proximity–land trade-off.
H2	Candidate lot + golf distance	Supported	27,600 sq ft at 2.49 km balances both	Choose balance, not a single-variable winner.
H3	Ready vs. renovation \$/sq ft	Supported	\$470 vs. \$247 per sq ft	Keep renovation as the value alternative.
Syn the sis	Weighted buyer fit	Decision	0.79, ahead of 0.66 next-best	Recommend house 6762700020.

Choose the strongest overall fit—not the cheapest single-metric winner

RECOMMENDED

House 6762700020

Buyer fit 0.79

- ✓ Largest living area: 12,050 sq ft
- ✓ Top grade: 13
- ✓ Second-largest lot: 27,600 sq ft
- ✓ Practical golf access: 2.49 km

Why the premium is rational

The \$7.70M price buys the only candidate that leads on overall fit while combining exceptional living area, top grade, substantial land and acceptable golf access.

Alternatives by priority

Land-first	5249800010
	43,838 sq ft lot • 7.24 km to golf • fit 0.66
Balanced lower-cost	1346300150
	2.00 km to golf • 7,710 sq ft living • fit 0.62
Golf-first	1118000320
	0.39 km to golf • smaller lot/living • fit 0.49

Decision: prioritize the rarest complete package; use alternatives only if the buyer changes the priority hierarchy.
